

Loughborough High School Sixth Form Lecture Series

Dr Blair Grubb

Department of Cell Physiology and Pharmacology
University of Leicester

Red Hot Chilli Peppers! - Temperature Sensation and Pain

Dr Blair's research interests: Primary sensory neurones that convey information about nociceptive stimuli (painful heat or mechanical stimuli) express a number of GPCRs, ion channels and enzymes, that are important for the transduction and/or propagation of information from the periphery to the spinal cord. Our experimental programme is aimed at identifying novel targets in primary sensory neurones that might be suitable for the development of analgesic drugs.

Tuesday 16th March, 4.05-5.00pm
Loughborough High School, Lecture Room

This lecture is open to sixth form students, parents, Old Girls and Old Loughburians, staff and former staff

Please arrive early to ensure a place
